Your Virtual GP Kit - everything your practice needs to begin virtual consults with your patients

This is an initiative produced in partnership between primary care networks, supported by Homecare Medical.

The transition is simple and easy. We've done the homework and the heavy lifting so that you don't have to, and you can focus on your patients and your practice.

THE KIT INCLUDES:

1. A guide for GP teams. Explaining the what, why, and how of delivering virtual consults.
2. A guide for the practice manager. Helping them to setup your virtual waiting room and determine what types of consults/symptoms are appropriate to schedule virtually.
3. A step-by-step setup guide with screenshots.

We piloted the Virtual GP Kit with practices and have updated the material based on their feedback.

They suggested highlighting two key things:

(1) The 'free' level of Doxy.me is all you need

- Our goal is to get you up and running with just an hour of setup and no cost to get started. Doxy.me is the video conferencing solution you need to run the virtual consult. It's designed especially for GPs. Simple and secure. No installations or downloads required for you or your patients.
- **The 'free' level of Doxy.me is all you need to get started. If you find that virtual consults are a good fit, you can expand the services and options, paying for features (those features are outlined in the handbooks and on the Doxy.me website).**

(2) You can use your existing PMS system alongside the Doxy.me to maintain a single, continuous record for your patient.

- There are two ways which you can integrate Doxy.me with your practice management system (PMS) to present a seamless workflow to your patients. These are outlined in the Practice Manager Handbook.

So you have all you need.

We hope this is a useful and powerful new tool for you, your practice, and your patients.
