

Spacing Influenza and mRNA-CV Vaccinations

Use a 3-dose schedule for people who are having both influenza and mRNA-CV (COVID-19) vaccination.

Give Priority to mRNA-CV Vaccination

- when a person is scheduled for mRNA-CV vaccination in the next 2 weeks follow Schedule A.
- For people who are not booked for mRNA-CV vaccination in the next 2 weeks follow Schedule B.
- A 2-week gap between influenza and mRNA-CV vaccines is recommended but there are no clinical safety concerns with a shorter gap.

Schedule A: Covid-19 vaccination in the next 2 weeks

Day 0	Day 21	Day 35 or later
mRNA-CV	mRNA-CV	Influenza vaccine

Schedule B: COVID-19 vaccination is not booked, or booking is more than 2 weeks in the future

Day 0	Day 14 (or later)	Day 35 (or 21 days after mRNA-CV dose one)
Influenza	mRNA-CV	mRNA-CV
